R82B_context_matched_rank_seed2 | Mechanism Evaluation

Historical R77B reference only. Matched R82A not run; no strict A/B causal conclusion.

Split	Within-context regret concordance	Conditional winner AUC	Context/method rows
VAL	0.6455734912966755	0.7057739935492473	2970
TEST	0.6470637845496554	0.6967925137023959	2970

Continuous regret concordance is not global AUC. Conditional winner AUC is reported separately.

Zero rescue uses native winner agreement, precision, and false-selection excess cost.

Both-wrong net saving = historical cost minus current cost on the same relevant rows.

Unseen TRAIN contexts are counted and excluded; conditions are never silently broadened.

No matched R82A exists. No strict A/B causal claim.

Fixed method-set totals; recall = native correct / native winner support.
