R93 | Plain classification: dropout B=0 vs A=0.1

Original R88B full18 model. One-forward raw-utility CE only; WD=1e-4 retained.

A/B code-level dropout contrast. Both omit comparison, risk and R-Drop; neither removes WD.

A: released3090_1; B:4090_1. Not bitwise hardware-matched; tiny differences are not dropout causal proof.

No architectural novelty/root-cause proof; no TEST selection; no second weight grid.

R89B main / R84A secondary are historical, not newly matched original-loss controls.
