# R91 | Utility risk/KL links minus utility-CE-only links

Identical R88B model; unique VAL checkpoint per arm. No new inference or checkpoint selection.

Historical R84A and same-role old-loss R88B; neither is a newly matched original-loss control.

VAL screen: Top1 strictly improves; macro mean cost and actual regret do not increase against both.

All18 tasks have equal macro weight. Original pair comparison, averaged-maximin focus and inference retained.
